-i- FUNCTION: Potently contract gastrointestinal (GI) smooth muscle. Induces proliferation, migration and fenestration (the formation of membrane discontinuities) in capillary endothelial cells derived from endocrine glands. Has little or no effect on a variety of other endothelial and non-endothelial cell types.

-i- SUBCELLULAR LOCATION: Secreted protein.

-i- TISSUE SPECIFICITY: Expressed in the steroidogenic glands, ovary, testis, adrenal and placenta.

-i- SIMILARITY: Belongs to the prokinecitin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MRGATRVSIMLLLVTVSDCAVITGACERDVQCGAGTCCAISLWLRGLRMCTPLGREGEEC

A structural homologue of colipase in black mamba venom revealed by NMR floating disulphide bridge analysis.";
J. Mol. Biol. 283:205-219(1998).
I- FUNCTION: Potently contracts gastrointestinal (GI) smooth muscle. May act on potensium channels, but not on Kvl.1, Kvl.2, Kvl.3, Kvl.4, Kvl.5, Kv2.1, Kv3.4, Kv4.2, TREK-1, HERG, KCNQ1, KCNQ2, KCNQ3, IRK1, IRK2, ROMK1, GIRK1, 2 and GIRK1, 4.
I- SUBCELIULAR LOCATION: Secreted protein.
I- SIMILARITY: Belongs to the prokinecitin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-MAY-1992, integrated into UniProtKB/Swiss-Prot.

                                                                                                                                                                                                                     Gaps

    similarity).
    SUBCELLULAR LOCATION: Secreted protein (By similarity).
    INSUE SPECIFICITY: Expressed at high levels in testis and at lower levels in brain, lung, ovary, spleen, thymus and uterus.
    INDUCTION: Activated by CLOCK and BWAL1 heterodimers and light; inhibited by period genes (PER1, PER2 and PER3) and cryptochrome genes (CRY1 and CRY2) (Probable).
    SIMILARITY: Belongs to the prokinecitin family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=22022134; PubMed=1202426; DOI=10.1038/417405a; Cheng M.Y., Bullock C.M., Li C., Lee A.G., Bermak J.C., Belluzzi J., Weaver D.R., Leslie F.M., Zhou Q.-Y.; Prokineticin 2 transmits the behavioural circadian rhythm of the suprachiasmatic nucleus.";
